

Intermediate Party–District Accounting Report

Cabinet and Ideological Coalition Inversions

Abstract

This intermediate report exposes the party–district accounting cells used to construct the coalition decomposition. It links the complete election-year panel to the observed-cabinet and ideological-interval inversion registries, while keeping calculation, validation, and presentation in a reproducible pipeline. All empirical tables and all case-specific findings in this document are generated from machine-readable intermediaries. There are no manually entered numerical rows in this source.

1 Purpose and evidentiary status

The report is an empirical diagnostic rather than part of the manuscript. Its purpose is to make visible how national party and coalition differentials accumulate across electoral units, and to identify patterns that may deserve substantive discussion later. The generated tables can subsequently be input individually into another L^AT_EX document, but this report does not copy or synchronize any asset into the manuscript.

The decomposition is strictly an *accounting identity*. It organizes an observed seat differential into internally consistent components; it does not identify a causal effect of an electoral rule, a party, a district, or a coalition. Rankings and sign patterns in the generated tables are therefore descriptive leads for interpretation, not estimates of responsibility.

2 Accounting definitions

Let i index parties and d index the electoral units used by the validated pipeline. Party i receives v_{id} valid federal-deputy votes and is attributed s_{id} federal-deputy seats in district d . District totals are $V_d = \sum_i v_{id}$ and $S_d = \sum_i s_{id}$; the corresponding national totals are $V = \sum_d V_d$ and $S = \sum_d S_d$. The party–district accounting cells are

$$a_{id} = s_{id} - S_d \frac{v_{id}}{V_d}, \quad (1)$$

$$b_{id} = S_d \frac{v_{id}}{V_d} - S \frac{v_{id}}{V}. \quad (2)$$

The first cell compares the seats attributed to a party with its exact within-district quota. A positive a_{id} means that the attributed seat count is above that benchmark; a negative value means it is below. The second cell compares the district quota contribution with the same votes’ contribution to a single national quota. Its equivalent factored form is

$$b_{id} = S \left(\frac{S_d}{S} - \frac{V_d}{V} \right) \frac{v_{id}}{V_d}. \quad (3)$$

This expression helps interpret the sign of b_{id} , but it does not isolate a single institutional mechanism. In particular, B must not be described as “pure malapportionment.” It combines the district seat weights present in national aggregation, differences in turnout and valid-vote totals, and the geographic distribution of party or coalition support. District magnitude can also shape the allocation environment represented in A .

The party aggregates are

$$A_i = \sum_d a_{id}, \quad B_i = \sum_d b_{id}, \quad d_i = A_i + B_i = s_i - S \frac{v_i}{V}. \quad (4)$$

For any reported coalition C , summing over its member parties gives

$$A_C = \sum_{i \in C} A_i, \quad B_C = \sum_{i \in C} B_i, \quad d_C = A_C + B_C = s_C - S \frac{v_C}{V}. \quad (5)$$

The generated closure tables and case outputs provide the numerical checks for these identities. The report uses the electoral units, party crosswalks, seat attributions, and valid-vote denominators already established by the corrected pipeline; it does not substitute a new denominator or reconstruct seats by a different rule.

2.1 Party attribution and coalition domains

Party and party–district entries must be read as ex post accounting attributions. In 2014 and 2018, seats were often allocated through joint electoral lists, so the entries do not describe autonomous party-level seat-allocation mechanisms. In 2022, electoral federations likewise require an ex post qualification when results are displayed under individual party labels. These qualifications apply even though the accounting equalities are exact.

Observed cabinet cases and ideological cases answer different questions. A cabinet case uses the corrected contemporaneous cabinet reconstruction. An ideological case is a synthetic connected interval in the validated ideological ordering restricted to Chamber-represented parties. The all-party ordering is retained in separate robustness outputs. Both specifications measure coalition vote shares against all valid federal-deputy votes, including zero-seat parties. Ideological cases can overlap or nest, so a party–district cell may enter several case summaries; those repetitions are not independent political observations. The ideological registry in this report contains inversion cases only. Negative comparisons and all admissible coalitions for both ideological universes are retained in the machine-readable pipeline outputs.

3 Generated interpretation

The following text is produced procedurally from the validated report tables. It reports descriptive patterns while preserving the accounting and party-attribution qualifications above.

The complete accounting base contains **2673** party–district cells. The linked inversion registry contains **4** observed cabinet cases and **12** ideological-interval cases. All 4 cabinet cases have positive A_C . In 3 of 4, negative B_C offsets part of that within-district accounting advantage; in the remaining 1, the two components reinforce one another. All 7 ideological inversions in 2014 have positive A_C ; B_C is negative and offsets part of A_C in 6 of 7. All 1 ideological inversions in 2018 have positive A_C ; B_C is negative and offsets part of A_C in 0 of 1. For 2018, B_C is positive in all 1 ideological inversions. All 4 ideological inversions in 2022 have positive A_C ; B_C is negative and offsets part of A_C in 0 of 4. For 2022, B_C is positive in all 4 ideological inversions. The district-weight audit shows a recurring geographic contrast: RR has the maximum positive seat–valid-vote weight gap, and SP the most negative gap, in every election (2014, 2018, 2022). By the factored identity for b_{id} , positive-vote cells in the first unit have positive b_{id} , while those in the second have negative b_{id} ; the magnitude still depends on each party’s local vote share.

Cabinet 2014/2016.2

The differential is $d_C = 20.27$, with $A_C = 15.74$ and $B_C = 4.53$: A+, B+: reinforcing accounting components. The largest positive and negative party d_i entries are PMDB (8.13) and PT (-2.42). The largest absolute district entries are RJ for a_{Cd} (4.72) and SP for b_{Cd} (-15.33). At party–district level, the largest absolute cells are PSD/RJ for a_{id} (2.56) and PT/SP for b_{id} (-5.85).

Cabinet 2014/2017.1

The differential is $d_C = 9.95$, with $A_C = 11.27$ and $B_C = -1.32$: A+, B-: B offsets part of A. The largest positive and negative party d_i entries are PMDB (8.13) and PSDB (-4.43). The largest absolute district entries are SP for a_{Cd} (2.47) and SP for b_{Cd} (-20.14). At party–district level, the largest absolute cells are PSD/RJ for a_{id} (2.56) and PSDB/SP for b_{id} (-8.19).

Cabinet 2018/2021.3/2022.1

The differential is $d_C = 14.62$, with $A_C = 19.07$ and $B_C = -4.45$: A+, B-: B offsets part of A. The largest positive and negative party d_i entries are PP (8.76) and PSL (-7.70). The largest absolute district entries are BA for a_{Cd} (2.18) and SP for b_{Cd} (-23.28). At party–district level, the largest absolute cells are PSL/SP for a_{id} (-4.61) and PSL/SP for b_{id} (-8.41).

Cabinet 2022/2023.1

The differential is $d_C = 12.20$, with $A_C = 13.20$ and $B_C = -0.99$: A+, B-: B offsets part of A. The largest positive and negative party d_i entries are UNIÃO (11.10) and PSOL (-6.06). The largest absolute district entries are RJ for a_{Cd} (2.92) and SP for b_{Cd} (-18.35). At party–district level, the largest absolute cells are MDB/PA for a_{id} (3.29) and PT/SP for b_{id} (-4.96).

Ideological 2014/5-16 PSB-PTN

The differential is $d_C = 9.03$, with $A_C = 10.51$ and $B_C = -1.48$: A+, B-: B offsets part of A. The largest positive and negative party d_i entries are PMDB (8.13) and PSDB (-4.43). The largest absolute district entries are PE for a_{Cd} (2.99) and SP for b_{Cd} (-20.03). At party–district level, the largest absolute cells are PSD/RJ for a_{id} (2.56) and PSDB/SP for b_{id} (-8.19).

Ideological 2014/5-17 PSB-PRTB

The differential is $d_C = 7.64$, with $A_C = 8.60$ and $B_C = -0.96$: A+, B-: B offsets part of A. The largest positive and negative party d_i entries are PMDB (8.13) and PSDB (-4.43). The largest absolute district entries are PE for a_{Cd} (2.89) and SP for b_{Cd} (-20.10). At party–district level, the largest absolute cells are PSD/RJ for a_{id} (2.56) and PSDB/SP for b_{id} (-8.19).

Ideological 2014/7-20 PV-PR

The differential is $d_C = 11.04$, with $A_C = 11.10$ and $B_C = -0.06$: A+, B-: B offsets part of A. The largest positive and negative party d_i entries are PMDB (8.13) and PSDB (-4.43). The largest absolute district entries are RJ for a_{Cd} (2.48) and SP for b_{Cd} (-20.52). At party–district level, the largest absolute cells are PSD/RJ for a_{id} (2.56) and PSDB/SP for b_{id} (-8.19).

Ideological 2014/8-20 PTB-PR

The differential is $d_C = 13.60$, with $A_C = 12.51$ and $B_C = 1.09$: A+, B+: reinforcing accounting components. The largest positive and negative party d_i entries are PMDB (8.13) and PSDB (-4.43). The largest absolute district entries are RJ for a_{Cd} (2.90) and SP for b_{Cd} (-18.63). At party–district level, the largest absolute cells are PSD/RJ for a_{id} (2.56) and PSDB/SP for b_{id} (-8.19).

Ideological 2014/9-23 PT DO B-PSDC

The differential is $d_C = 6.44$, with $A_C = 7.15$ and $B_C = -0.71$: A+, B-: B offsets part of A. The largest positive and negative party d_i entries are PMDB (8.13) and PSDB (-4.43). The largest absolute district entries are DF for a_{Cd} (2.19) and SP for b_{Cd} (-21.79). At party–district level, the largest absolute cells are PSD/RJ for a_{id} (2.56) and PSDB/SP for b_{id} (-8.19).

Ideological 2014/9-24 PT DO B-PSL

The differential is $d_C = 3.18$, with $A_C = 3.86$ and $B_C = -0.68$: A+, B-: B offsets part of A. The largest positive and negative party d_i entries are PMDB (8.13) and PSDB (-4.43). The largest absolute district entries are MA for a_{Cd} (-2.78) and SP for b_{Cd} (-21.97). At party–district level, the largest absolute cells are PSD/RJ for a_{id} (2.56) and PSDB/SP for b_{id} (-8.19).

Ideological 2014/10-24 SOLIDARIEDADE-PSL

The differential is $d_C = 6.46$, with $A_C = 7.47$ and $B_C = -1.01$: A+, B-: B offsets part of A. The largest positive and negative party d_i entries are PMDB (8.13) and PSDB (-4.43). The largest absolute district entries are MA for a_{Cd} (-2.20) and SP for b_{Cd} (-21.90). At party–district level, the largest absolute cells are PSD/RJ for a_{id} (2.56) and PSDB/SP for b_{id} (-8.19).

Ideological 2018/3-16 PT-PSDB

The differential is $d_C = 10.75$, with $A_C = 6.57$ and $B_C = 4.18$: A+, B+: reinforcing accounting components. The largest positive and negative party d_i entries are MDB (5.60) and PV (-4.32). The largest absolute district entries are MG for a_{Cd} (3.39) and SP for b_{Cd} (-15.64). At party–district level, the largest absolute cells are PSDB/PB for a_{id} (1.49) and PT/SP for b_{id} (-3.94).

Ideological 2022/11-20 MDB-UNIÃO

The differential is $d_C = 12.51$, with $A_C = 2.95$ and $B_C = 9.55$: A+, B+: reinforcing accounting components. The largest positive and negative party d_i entries are UNIÃO (11.10) and PTB (-5.67). The largest absolute district entries are AP for a_{Cd} (-2.11) and SP for b_{Cd} (-16.47). At party–district level, the largest absolute cells are MDB/PA for a_{id} (3.29) and UNIÃO/SP for b_{id} (-3.06).

Ideological 2022/15-23 PROS-PL

The differential is $d_C = 19.39$, with $A_C = 16.35$ and $B_C = 3.04$: A+, B+: reinforcing accounting components. The largest positive and negative party d_i entries are PL (13.78) and PTB (-5.67). The largest absolute district entries are AC for a_{Cd} (3.56) and SP for b_{Cd} (-18.68). At party–district level, the largest absolute cells are PL/RN for a_{id} (2.41) and PL/SP for b_{id} (-9.02).

Ideological 2022/16-23 PTB-PL

The differential is $d_C = 20.14$, with $A_C = 17.38$ and $B_C = 2.77$: A+, B+: reinforcing accounting components. The largest positive and negative party d_i entries are PL (13.78) and PTB (-5.67). The largest absolute district entries are AC for a_{Cd} (3.58) and SP for b_{Cd} (-18.58). At party–district level, the largest absolute cells are PL/RN for a_{id} (2.41) and PL/SP for b_{id} (-9.02).

Ideological 2022/17-23 PP-PL

The differential is $d_C = 25.81$, with $A_C = 23.32$ and $B_C = 2.49$: A+, B+: reinforcing accounting components. The largest positive and negative party d_i entries are PL (13.78) and NOVO (-3.35). The largest absolute district entries are AC for a_{Cd} (3.58) and SP for b_{Cd} (-18.21). At party–district level, the largest absolute cells are PL/RN for a_{id} (2.41) and PL/SP for b_{id} (-9.02).

The complete vectors below are required to judge concentration and offsetting. An extreme cell is a lead for substantive investigation, not evidence that the identified party or district caused the inversion.

4 Party size, cabinet participation and the within-district component

These are descriptive accounting comparisons, not a causal model of cabinet formation or of party-size effects. Each pooled observation is one election-year party, equally weighted. Cabinet membership uses the existing translated election-year registry. The 5% benchmark is descriptive only, not an electoral threshold or theoretical cutoff. Since $q_i = 513v_i/V$, vote share and q_i have identical correlations. Ratios are dimensionless; A_i is measured in seats.

Table 1: Party size by cabinet participation

Election	Ever cabinet	n	Mean vote %	Median vote %	Mean q	Median q
2014	Yes	15	5.63	4.55	28.91	23.32
2014	No	17	0.91	0.69	4.67	3.52
2018	Yes	11	5.05	5.32	25.92	27.28
2018	No	24	1.85	1.40	9.49	7.20
2022	Yes	11	5.80	6.96	29.75	35.68
2022	No	21	1.72	0.87	8.85	4.48
pooled	Yes	37	5.51	5.32	28.27	27.28
pooled	No	62	1.55	0.83	7.95	4.27

Table 2: Party-size associations

Election	n	Pearson A	Pearson A/q	Spearman A	Spearman A/q
2014	32	0.455	0.506	0.475	0.624
2018	35	0.520	0.647	0.408	0.781
2022	32	0.810	0.708	0.150	0.803
pooled	99	0.634	0.609	0.383	0.774

Table 3: Descriptive national-vote size groups

Election	Vote group	n	A mean / median	A/q mean / median	Positive A: n (%)
2014	<1%	14	-1.04 / -0.95	-0.536 / -0.622	3 (21.43)
2014	1 to <3%	7	-0.74 / -0.33	-0.080 / -0.025	2 (28.57)
2014	3 to <5%	4	0.88 / -0.15	0.043 / -0.007	1 (25.00)
2014	>=5%	7	2.32 / 2.64	0.068 / 0.069	6 (85.71)
2018	<1%	11	-1.37 / -1.15	-0.754 / -0.924	0 (0.00)
2018	1 to <3%	13	-1.98 / -2.76	-0.195 / -0.293	2 (15.38)
2018	3 to <5%	2	3.84 / 3.84	0.161 / 0.161	2 (100.00)
2018	>=5%	9	3.68 / 4.34	0.128 / 0.142	8 (88.89)
2022	<1%	12	-0.56 / -0.46	-0.790 / -0.933	1 (8.33)
2022	1 to <3%	8	-3.01 / -3.14	-0.394 / -0.416	1 (12.50)
2022	3 to <5%	5	-3.71 / -3.40	-0.209 / -0.188	0 (0.00)
2022	>=5%	7	7.06 / 5.12	0.125 / 0.137	7 (100.00)
pooled	<1%	37	-0.98 / -0.78	-0.683 / -0.844	4 (10.81)
pooled	1 to <3%	28	-1.97 / -2.48	-0.223 / -0.264	5 (17.86)
pooled	3 to <5%	11	-0.67 / -0.25	-0.050 / -0.012	3 (27.27)
pooled	>=5%	23	4.30 / 4.26	0.109 / 0.126	21 (91.30)

Across party-elections, 21/23 parties with at least 5% of votes have positive A_i , compared with 12/76 below 5%. Cabinet participants have larger means and medians in each election, and normalization by q_i retains a positive size association. This is not a monotonic size gradient: the

2022 intermediate-size group (3 to less than 5%) is entirely negative, while many tiny parties have small absolute losses. The large-party exception PT 2014 has 13.92% of votes, $A_i = -1.22$ and $A_i/q_i = -0.017$. The large-party exception PSL 2018 has 11.64% of votes, $A_i = -2.42$ and $A_i/q_i = -0.041$. Large parties also remain outside cabinet: the largest nonparticipant in each election is SOLIDARIEDADE 2014 (2.76% of votes); PT 2018 (10.31% of votes); PL 2022 (16.61% of votes).

All 23 current cabinet observations have positive A_C ; $B_C > 0$ in 6 of them. There are 22 distinct election-year party sets. The nonadjacent 2020.4 and 2021.1 observations share a set, but remain separate chronology rows. The existing adjacent 2021.3/2022.1 observation is unchanged. Positive contributions from members with at least 5% of votes exceed all negative member contributions in every set; they supply 68.67–99.42% of gross positives. The smallest such remaining balance is 1.10 seats. Net A_C ranges from 5.68 to 22.14 seats.

- 2014 recurring positive members: PR: $A_i = 5.04$, 4 observations; PSD: $A_i = 4.65$, 7 observations; PTB: $A_i = 4.08$, 5 observations; PMDB: $A_i = 3.91$, 8 observations.
- 2018 recurring positive members: PP: $A_i = 7.32$, 4 observations; PR: $A_i = 6.37$, 11 observations; DEM: $A_i = 4.58$, 12 observations; PRB: $A_i = 4.38$, 12 observations.
- 2022 recurring positive members: UNIÃO: $A_i = 9.36$, 2 observations; PT: $A_i = 9.07$, 3 observations; MDB: $A_i = 5.12$, 3 observations.

The weakest net total belongs to period(s) 2020.2: $A_C = 5.68$, with gross positives 15.75 and negatives -10.07. The three largest members by q_i supply as little as 17.14% of gross positive A_i ; the explanation concerns a broader group of relatively large members. All distinct-set decompositions and all 23 period links are retained in the machine-readable outputs. The group arithmetic holds fixed the observed party contributions; it is not a simulated seat allocation after removing parties.

5 Accounting base and closure

5.1 Election-year accounting closure

Table 4: Election-year accounting base and closure

Year	Parties	Units	Cells	V	S	$\sum A_i$	$\sum B_i$	$\sum d_i$	Max residual	Status
2014	32	27	864	97355354	513	0.000	-0.000	-0.000	0.000	PASS
2018	35	27	945	98264190	513	-0.000	0.000	0.000	0.000	PASS
2022	32	27	864	109413508	513	0.000	0.000	-0.000	0.000	PASS

Notes: All complete-system sums are exact zero internally. Displayed residuals are decimal audit products.

5.2 District seat–vote weight extremes

The district table describes the weighting environment that enters b_{id} . It should be read jointly with coalition vote geography rather than as a stand-alone ranking of institutional advantage.

Table 5: District seat–valid-vote weight extremes

Year	Direction	Rank	Unit	V_d	S_d	Vote wt.	Seat wt.	Seat-eq. gap
2014	largest positive	1	RR	238099	8	0.002	0.016	6.745
2014	largest positive	2	AP	386084	8	0.004	0.016	5.966
2014	largest positive	3	AC	399201	8	0.004	0.016	5.896
2014	most negative	1	SP	21266194	70	0.218	0.136	-42.059
2014	most negative	2	PA	3756049	17	0.039	0.033	-2.792
2014	most negative	3	SC	3391619	16	0.035	0.031	-1.872
2018	largest positive	1	RR	270708	8	0.003	0.016	6.587
2018	largest positive	2	AP	364871	8	0.004	0.016	6.095
2018	largest positive	3	AC	417502	8	0.004	0.016	5.820
2018	most negative	1	SP	21131103	70	0.215	0.136	-40.317
2018	most negative	2	PA	3956457	17	0.040	0.033	-3.655
2018	most negative	3	SC	3548458	16	0.036	0.031	-2.525
2022	largest positive	1	RR	291714	8	0.003	0.016	6.632
2022	largest positive	2	AP	423017	8	0.004	0.016	6.017
2022	largest positive	3	AC	434253	8	0.004	0.016	5.964
2022	most negative	1	SP	23321040	70	0.213	0.136	-39.344
2022	most negative	2	PA	4521516	17	0.041	0.033	-4.200
2022	most negative	3	SC	3969848	16	0.036	0.031	-2.613

Notes: The seat-equivalent gap is $S_d - SV_d/V$. It is a weighting diagnostic, not a pure-malapportionment estimate.

6 Inversion case registry

The registry preserves the distinction between observed cabinet coalitions and synthetic ideological intervals. Minimality is meaningful only within the ideological connected-interval domain.

Table 6: Observed-cabinet and ideological inversion case registry

Domain	Year	Case	Vote %	Seats	Parties	Composition	Minimality
cabinet	2014	2016.2	46.54	259	7	PCdoB, PDT, PMDB, PR, PSD, PT, PTB	not applicable
cabinet	2014	2017.1	49.91	266	8	DEM, PMDB, PP, PPS, PSB, PSD, PSDB, PV	not applicable
cabinet	2018	2021.3/2022.1	47.25	257	9	DEM, PATRIOTA, PP, PR, PRB, PSC, PSD, PSDB, PSL	not applicable

Notes: $d_C = A_C + B_C$ is an accounting identity. B_C combines district seat weights, valid-vote weights, and coalition vote geography.

7.1 Largest component contributions

Extremes locate the parties and districts most useful for closer inspection. They do not by themselves establish that a case is concentrated: that judgment must also use the complete vectors and the party–district panel below.

Table 8: Largest positive and negative party and district contributions by case

Domain	Year	Case	Level	Component	Largest positive	Value	Most negative	Value
cabinet	2014	2016.2	party	A_i	PR	5.04	PT	-1.22

Notes: District rows sum to the case-level A_C , B_C , and d_C values.

9 Party–district cell extremes by case

The cell-level extremes show where the party and geographic accounts intersect. Because cases may share parties or be nested, the same cell can appear in multiple case panels.

Table 11: Largest positive and negative party–district cells by inversion case

Notes: A party–district extreme is a descriptive accounting lead. Repeated cells across nested ideological cases are not independent observations.

A Complete party–district accounting panels

These generated long tables report every completed party–district cell, including explicit zero cells, separately by election year. They are the reusable numerical source behind the case-linked summaries above.

A.1 2014

Table 12: Complete party–district accounting panel, 2014
